PROFESSIONAL SUMMARY

Senior Frontend Engineer with 5 years building user-facing products at scale on React, Next.js, and TypeScript. Built Times of India's ePaper platform (Times Group ecosystem — 10M+ digital DAU, 60M+ app MAU), the American Arbitration Association's legal-tech arbitration product (largest US arbitration body, 180K+ annual cases), and a multi-tenant Auth0 SSO. Specialized in frontend architecture, performance engineering, AI/LLM integration, and accessibility. Track record of end-to-end ownership, mentoring direct reports, and conducting senior-level interviews.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS, Node.js

Frameworks: React, Next.js, React Native, Express.js

Architecture: Micro-Frontends, Module Federation, SSR, SSG, ISR, BFF Pattern, Design Systems, Component Libraries, Component-Driven Development

AI Integration: Claude API, LLM Integration, Streaming Responses, Prompt Engineering

AI Dev Tools: GitHub Copilot, Claude Code, Cursor, Codex

State & Data: Redux, Redux Toolkit, Zustand, Context API, React Query, REST APIs, GraphQL, WebSockets

UI & Styling: Tailwind CSS, Material UI, Styled Components, Bootstrap, Framer Motion

Web Performance: Core Web Vitals (LCP, INP, CLS), Lighthouse, Code Splitting, Lazy Loading, List Virtualization, Bundle Analysis, Caching, CDN

Auth & Security: Auth0, OAuth 2.0, OIDC, SAML, JWT, Multi-Tenant SSO, RBAC

Testing: Jest, React Testing Library, Cypress, Playwright

Build & Tooling: Vite, Webpack, Babel, ESLint, Prettier, Storybook

Cloud & DevOps: AWS (S3, CloudFront), Netlify, Azure, CI/CD, GitHub Actions

Quality & Web: WCAG 2.1 Accessibility, i18n / Localization, SEO, Web Speech API, Google Analytics, GTM, AdSense

Collaboration: Git, GitHub, GitLab, Bitbucket, Jira, Agile/Scrum, Code Reviews, Mentoring, Technical Interviewing

PROFESSIONAL EXPERIENCE

Zensar Technologies — Senior Software Engineer

Pune, India | Jun 2025 – Present

- Own end-to-end frontend for the **AAA Digital Dispute Resolution platform** — legal-grade arbitration product for the American Arbitration Association (largest US arbitration administrator, ~88% market share, 180K+ annual cases) managing case filings, evidence workflows, hearings, and arbitrator verdicts.
- Architected the **multi-step case submission module** on React + TypeScript with chunked document uploads, draft auto-persistence, schema-driven validation, and role-based UI states — replacing a fragmented legacy flow and stabilizing the platform's highest-traffic intake surface.
- Integrated **Claude API** into arbitration dashboards with streaming responses and structured prompt design, auto-summarizing 30–60 page case documents into expandable, navigable briefs — substantially reducing arbitrator first-pass review time and surfacing critical case context within seconds.
- Designed and shipped a **multi-tenant Auth0 SSO platform end-to-end** (POC to production) with a **Node.js token-exchange backend**, custom Universal Login, RBAC, and tenant-aware routing — now the centralized auth layer across multiple internal applications.
- Contributing to a **micro-frontend modernization** using Webpack Module Federation, enabling independent team deploys, shared runtime dependencies, and incremental migration of a large legacy monolith without a big-bang rewrite.
- Migrated legacy modules to **Vite**, cutting build times from **~90s to under 20s (4.5x faster)** and HMR feedback to sub-second; directly boosted team-wide development throughput.
- Refactored unstable, prop-drilled UI to **Zustand** with reusable selectors and sliced stores for filters, pagination, and async data — eliminated redundant re-renders and stabilized the highest-churn screens.
- Established **Jest + React Testing Library** coverage across filters, role-based rendering, and async workflows — preventing regressions during weekly production releases.

- Drove **WCAG 2.1 AA compliance** through keyboard navigation, ARIA semantics, focus management, and screen-reader support — critical for legal workflows where accessibility is statutorily required.
- Conducted **20+ senior-level frontend interviews**, led PR reviews across the team, and mentored junior engineers — directly contributing to hiring quality and team velocity.
- Leverage **AI-assisted engineering tools** (GitHub Copilot, Cursor, Claude Code) daily for component scaffolding, refactoring, and test generation — accelerating frontend delivery while maintaining strong code review discipline and engineering judgment.

Harns Technologies Pvt Ltd — SDE-II

Mumbai, India | Jun 2021 – Jun 2025

- Owned and shipped the **Times of India ePaper platform from scratch to production** — part of Times Group's digital ecosystem (10M+ digital DAU, 60M+ app MAU; India's #1 English daily) — and launched **3 additional regional ePapers** on the same platform, with a **shared React component library and frontend architecture** reused across all ePapers and the standalone Archive app.
- Spearheaded **Adlob end-to-end** — Times of India's single-platform advertisement booking product used by **200+ media agencies**, developed from scratch on React with virtualized calendar inventory grids, campaign creation, and booking workflows.
- Created a **custom CMS** for podcast and post management, enabling editorial teams to self-serve content publishing without engineering involvement.
- Developed ePaper on **React + SSR + Context API** with **Google AdSense, GTM, and analytics** integrations driving traffic growth and ad-revenue monetization; engineered a **text-to-speech reader** via the Web Speech API for accessibility and differentiated audio consumption.
- Implemented **advanced multi-keyword archive search** across years of historical editions with complex query scenarios (boolean operators, date ranges, edition filters) — enabling deep content discovery for readers and researchers.
- Achieved **strong Lighthouse and Core Web Vitals scores** across ePaper through code splitting, lazy loading, image optimization, and route-level prefetching; drove **WCAG 2.1 accessibility** for a mass-market news audience.
- Solved a critical rendering bottleneck on data-heavy archive views using **list virtualization and lazy hydration**, cutting DOM render from **~20s to under 1s (20x improvement)** and unblocking the archive product launch.
- Migrated the **US-based Veterinary SaaS** from a legacy stack to **Next.js** for 50+ hospitals; delivered core modules of **Libsi Markah** multilingual e-commerce (payment flow, product page, cart) on Next.js + Redux Toolkit.
- Mentored and led a **team of 5 frontend engineers as direct reports** — directed task planning, code reviews, delivery timelines, and growth conversations.
- Owned **on-call coverage for peak-traffic production releases** during major national events (general elections, Union Budget) — partnered directly with engineering leadership and CEO to ensure zero-downtime delivery on properties absorbing massive traffic spikes from one of India's most-read news destinations.

EDUCATION

B.Tech, Chemical Engineering • Heritage Institute of Technology, Kolkata 2016 – 2020

AWARDS

Customer Focus Award — recognized for client-delivery excellence on high-traffic Times Group production products
