

MD AQUIB YAZDANI

Senior Software Engineer | React • Next.js • TypeScript • Frontend Architecture • AI Integration
Pune, India • +91 8210773776 • yazdaniaquib2@gmail.com • linkedin.com/in/aquibyazdani • aquibyazdani.com

PROFESSIONAL SUMMARY

Senior Software Engineer with 5 years of experience shipping production-grade React applications at scale. Engineered the Times of India ePaper platform within the Times Group digital ecosystem (10M+ digital DAU, 60M+ app MAU) and the American Arbitration Association's legal-tech arbitration platform (180K+ annual cases). Specialized in frontend architecture, micro-frontends, performance engineering, AI/LLM integration, and accessibility. Consistent track record of end-to-end ownership across high-traffic products, leading direct reports, and conducting senior-level technical interviews. Currently deepening work in AI-integrated frontend systems and edge rendering patterns.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS

Frontend: React, Next.js, Tailwind CSS, Material UI, Styled Components, Framer Motion, Bootstrap, Storybook

Backend: Node.js, Express.js, REST APIs, GraphQL, WebSockets

Architecture: Micro-Frontends, Webpack Module Federation, SSR, SSG, ISR, BFF Pattern, Design Systems, Component-Driven Development

State & Data: Redux, Redux Toolkit, Zustand, Context API, React Query

AI & Dev Tools: Claude API, LLM Integration, Streaming Responses, Prompt Engineering, GitHub Copilot, Cursor, Claude Code

Performance: Core Web Vitals (LCP, INP, CLS), Lighthouse, Code Splitting, Lazy Loading, List Virtualization, Bundle Analysis, CDN

Testing: Jest, React Testing Library, Cypress, Playwright

Build & Tooling: Vite, Webpack, Babel, ESLint, Prettier

Cloud & Deployment: AWS (S3, CloudFront), Netlify

Quality & Standards: WCAG 2.1 Accessibility, i18n/Localization, SEO, Web Speech API, Google Analytics, GTM

Collaboration: Git, GitHub, GitLab, Jira, Agile/Scrum, Code Reviews, Mentoring, Technical Interviewing

PROFESSIONAL EXPERIENCE

Zensar Technologies — Senior Software Engineer

Pune, India • Jun 2025 – Present

- Own end-to-end frontend for the **AAA Digital Dispute Resolution platform**, a legal-grade arbitration system for the American Arbitration Association (largest US arbitration administrator, ~88% market share, 180K+ annual cases) spanning case filings, evidence workflows, hearings, and arbitrator verdicts.
- Architected the **multi-step case submission module** in React and TypeScript with chunked document uploads, draft auto-persistence, schema-driven validation, and role-based UI states, replacing a fragmented legacy flow and stabilizing the platform's highest-traffic intake surface.
- Integrated the **Claude API** into arbitration dashboards with streaming responses and structured prompt design, auto-summarizing 30 to 60 page case documents into expandable navigable briefs, substantially reducing arbitrator first-pass review time and surfacing critical case context within seconds.
- Shipped a **multi-tenant Auth0 SSO platform end-to-end** (POC to production) across 3 tenant configurations, with a custom token-exchange layer, Universal Login, RBAC, and tenant-aware routing, now serving as the centralized authentication layer across multiple internal applications.
- Contributing to a **micro-frontend modernization** via Webpack Module Federation, enabling independent team deploys, shared runtime dependencies, and incremental migration away from a large legacy monolith without a big-bang rewrite.
- Migrated legacy build configuration to **Vite**, reducing build times from approximately 90 seconds to under 20 seconds (4.5x faster) and cutting HMR feedback to sub-second, directly improving team-wide development throughput.
- Refactored prop-drilled, unstable UI to **Zustand** with reusable selectors and sliced stores across filters, pagination, and async data flows, eliminating redundant re-renders and stabilizing the highest-churn screens.
- Established **Jest and React Testing Library** coverage across filter logic, role-based rendering, and async workflows, preventing regressions during weekly production releases.
- Drove **WCAG 2.1 AA** compliance via keyboard navigation, ARIA semantics, focus management, and screen-reader support, critical for legal workflows where accessibility is statutorily required.
- Conducted **20+ senior-level frontend interviews**, led team-wide PR reviews, and mentored junior engineers, directly contributing to hiring quality and delivery velocity.

Harns Technologies — Software Development Engineer II

Mumbai, India • Jun 2021 – Jun 2025

- Owned and shipped the **Times of India ePaper platform** from scratch to production, part of the Times Group digital ecosystem (10M+ digital DAU, 60M+ app MAU; India's #1 English daily).
- Extended the ePaper architecture to launch **3 additional regional ePapers** on the same platform, with a shared React component library and frontend architecture reused across all editions and a standalone Archive application.
- Spearheaded **Adlob** end-to-end, Times of India's unified advertisement booking platform used by 200+ media agencies, built from scratch on React with virtualized calendar inventory grids, campaign creation workflows, and booking management.
- Resolved a rendering bottleneck on archive views with dense paginated data through **list virtualization and lazy hydration**, bringing DOM render time from ~20s to under 1s and unblocking the archive product launch.
- Engineered the ePaper on React with **SSR**, Context API, Google AdSense, GTM, and analytics integrations supporting ad-revenue monetization; built a **text-to-speech reader** via the Web Speech API for accessible audio consumption.
- Delivered **advanced multi-keyword archive search** across years of historical editions with boolean operators, date ranges, and edition filters, enabling deep content discovery for readers and researchers.
- Achieved strong **Lighthouse and Core Web Vitals** scores across ePaper through code splitting, lazy loading, image optimization, and route-level prefetching; drove WCAG 2.1 AA compliance for a mass-market news audience.

- Migrated a US-based **Veterinary SaaS** serving 50+ hospitals from a legacy stack to Next.js; delivered core modules of **Libsi Markah** multilingual e-commerce (payment flow, product pages, cart) on Next.js and Redux Toolkit.
- Built a **custom CMS** for podcast and post management, enabling editorial teams to self-serve content publishing and removing engineering as a bottleneck.
- Mentored and led a **team of 5 frontend engineers** as direct reports, directing task planning, code reviews, delivery timelines, and growth conversations.
- Owned **on-call coverage** during peak-traffic production releases for major national events including general elections and the Union Budget, collaborating directly with engineering leadership and the CEO to ensure zero-downtime delivery.

NOTABLE PROJECTS

WooVet • woovet.com • *Next.js, TypeScript*

AI-powered veterinary practice management platform (PIMS) serving 50+ hospitals. Features AI-assisted clinical diagnostics (Coggo Assess), voice-driven SOAP note generation (Coggo Voice), and a real-time clinic management whiteboard. Migrated from a legacy stack to Next.js, delivering a modern, performant frontend.

Libsi Markah • libsimarkah.com • *Next.js, Redux Toolkit*

Multilingual e-commerce platform covering payment flow, product pages, and cart. Implemented SEO-friendly practices and delivered localization across multiple languages.

EDUCATION

B.Tech, Chemical Engineering • Heritage Institute of Technology, Kolkata

2016 – 2020

ACHIEVEMENTS

Customer Focus Award — Recognized for client-delivery excellence on high-traffic Times Group production products.
